Comparative Regionalism

All is not well in the World Trade Organization. Does a global economy require global institutions? One possible alternative is interregionalism: Economic integration between two distinct regions. This book explores the logic of interregionalism by focusing on the European Union, which has pursued agreements with Latin America, East Asia, and the Southern Mediterranean, among others. Why has the EU pursued this strategy? Based on a novel theoretical framework, the authors in this book explore EU interregionalism to provide us with insight into this new emerging face of the international political economy.

Outlines and Highlights for Global Political Economy by John Ravenhill, Isbn

The connections between trade and security are hardly new. Analysts and practitioners have clearly recognized this interrelationship since the mercantilist arguments of the 16th and 17th centuries. Despite wishful economic liberal thinking that might prefer to separate the political from the economic, it is widely recognized that trade and security are fundamentally interconnected in the foreign policy of states. Over time, as new forms of trade policy have come into being and the international security environment has evolved, the nexus of these two spheres has grown more complex and scholars have struggled to understand their interconnection. This edited volume addresses the links between trade and security by examining the influence of security factors in driving trade policy measures and the corresponding implications of different types of trade arrangements for international security. Ultimately, the project shows that several elements—traditional economic factors, traditional security factors, and human security factors—can affect the development of trade agreements and unilateral policies, and that trade policies may have both a direct and an indirect effect on traditional and human security. The project focuses on Asia, a region where economics is increasingly important but many security issues still linger unresolved, as a primary setting to test trade linkage theories. It also provides a comparative perspective through examination of how the EU and US have used their trade policies to achieve non-economic goals and how these policies have influenced their security environment. Case studies in this project cover key trade

Coping With Globalization

An expert team of international authors present a diverse and comprehensive selection of theories and issues, carefully brought together by experienced editor John Ravenhill. Crucially, debates are presented through a critical lens to encourage students to unpack claims, form independent views, and challenge assumptions. This text is the only introduction to global political economy that lets students learn from the very top scholars in the field. Now in its sixth edition, this highly successful textbook has been thoroughly updated with contemporary real world examples, including the impact of the Trump administration, Brexit, and economic nationalism. Furthermore, new analysis has been added on the international political economy of work, labour, and energy. This ensures that Global Political Economy is the most up-to-date and relevant textbook on the subject available. This book is supported by online resources designed to help students take their learning further.

International Political Economy

A major new text on contemporary global political economy that focuses centrally on key issues and actors. Concise and accessibly written, it provides an ideal introduction to the contemporary dynamics and processes of change in the global political economy.

Global Political Economy

East Asia is a powerhouse of automobile production. Yet, across the region, national automobile industries have had strikingly different patterns of development. Despite starting from equally low levels of performance and initially similar strategies, countries have experienced vastly different results. From Thailand's success as an assembly hub for foreign automakers and China's unexpected achievements in building its own car industry, to South Korea's impressive development of an integrated industry, to the Philippines' persistent weakness, these divergent paths offer a fascinating window into the determinants of economic growth. The Political Economy of Automotive Industrialization in East Asia provides a political explanation for why development strategies and performance have been so uneven within one of the world’s most important regions. Utilizing interviews and original-language research from multiple nations, this book explains that factors such as market size and neoclassical economic policies alone cannot explain these patterns of development. Richard F. Doner, Gregory W. Noble, and John Ravenhill instead highlight the significance of two sets of factors: countries' very different capabilities for implementing policies and the political forces that help to explain the emergence of effective institutions. Through cross-national analyses of China, Taiwan, South Korea, Indonesia, Malaysia, the Philippines, and Thailand, the book sets up a clear structure for understanding industrial development and how it enables or constrains the capabilities of domestic firms. Brief comparisons with Brazil, Mexico, and other developing countries confirm the utility of the analytic framework and demonstrate how it is superior both to accounts in mainstream economics and much of political science, which fail to give sufficient emphasis to the role of public and public-private institutions, or provide an explanation of the political bases of those institutions. In a world where auto assemblers and suppliers are facing new challenges in an ever-evolving industry—such as the transition to electric and autonomous vehicles—this book offers a crucial perspective on the centrality of institutional capacities and political economy. By tracing the divergent trajectories of seven nations, The Political Economy of Automotive Industrialization in East Asia offers lessons beyond the automobile industry that illustrate the broader importance of institutions to economic growth.

Political Economy and the Changing Global Order

The book gathers together a set of lively, provocative essays by leading voices in International Political Economy to debate the evolution of the field, its current state and its future directions. Prompted by recent commentaries on the existence of a ‘transatlantic divide’ in IPE between an ‘American school’ and a ‘British school’, the essays provide a wide-ranging discussion of whether it is useful to think of the field in these terms, what the ‘American’ and ‘British’ schools look like, what their achievements and shortcomings are, and what are the desirable future directions for IPE scholarship. The diverse responses to these questions reflect the ongoing vibrancy and diversity of the field of IPE, and open up an imaginative and engaging discussion about where we need to go from here. Featuring contributions from the most influential scholars in the field from North America, Canada and the UK, this book is essential reading for anyone interested in the cutting edge debates in contemporary international political economy.

Global Political Economy

Combining history and theoretical approaches with contemporary issues and debates, Global Political Economy provides an authoritative introduction to this important subject.

Pathways from Preferential Trade
Praised for its authoritative coverage, Global Political Economy places the study of international political economy (IPE) in its broadest theoretical context, now updated to cover the ongoing global economic crisis and regional relationships and impacts. This text not only helps students understand the fundamentals of how the global economy works but also encourages them to use theory to more fully grasp the connections between key issue areas like trade and development. Written by a leading IPE scholar, this text equally emphasizes theory and practice to provide a framework for analyzing current events and long-term developments in the global economy. New to the Seventh Edition Focuses on the ongoing global economic crisis and the continuing European sovereign debt crisis, along with other regional economic issues, including their implications for relationships in the global economy. Offers fuller and updated discussions of critical perspectives like feminism and environmentalism, and includes new material differentiating among the terms neomercantilism, realism, mercantilism, and economic nationalism. Updated, author-written Test Bank is provided to professors as an e-Resource on the book’s Webpage.

Oxford Handbook of the International Relations of Asia

This new edited textbook brings together leading international experts to provide an authoritative introduction to the major subject areas on undergraduate courses in global political economy. It is a 'stand-alone' textbook that deals with central themes and issues as well as outlining different theoretical approaches and engaging with contemporary debates such as global trade and production, global finance and the consequences of globalization. It is divided by subject area into 4 sections for ease of navigation, and then sub-divided into chapters, each of which has been specifically written for this book. Carefully edited by John Ravenhill, the text reads as an integrated whole and is suitable as an introductory text for undergraduates in both coverage and approach, each chapter making full use of learning aids such as boxes to summarize key terms and debates, chronologies, case studies, web links and further reading, which complement the lively presentation of the subject.

Global Capitalism

This handbook examines the theory and practice of international relations in Asia. Building on an investigation of how various theoretical approaches to international relations can elucidate Asia’s empirical realities, authors examine the foreign relations and policies of major countries or sets of countries.

This book develops an approach to international political economy that focuses on culture. It examines Chilean communication scholarship as it developed under shifting political regimes and changing international political economic relations. Also examined is the importance of agency and culture in the political processes of building and challenging transnational hegemony, emphasizing the role of intellectuals.

The Oxford Handbook of the Economics of the Pacific Rim

International Relations emerged as a distinct academic discipline in the early twentieth century, but its philosophic foundations draw on centuries of thinking about human nature, power and authority, justice and injustice, and their implications for relations within and between political communities. In this fully revised and updated third edition of her popular text, Stephanie Lawson retains a broad historical and contextual approach in introducing readers to the central themes and theoretical perspectives in IR while also addressing key issues and challenges in the contemporary period. These include the emergence of states and empires, theories ranging from classical realism and liberalism to postcolonial and ‘green’ theory, twentieth-century international history, security and insecurity, global governance and world order, international political economy, globalization, the future of the sovereign state and the prospects for a ‘post-international’ world. Written in an accessible narrative style, this book is an ideal primer for students at undergraduate level and beyond, including those undertaking postgraduate study in IR with little or no previous academic training in the field.

One of the world's leading economists of inequality, Branko Milanovic presents a bold new account of the dynamics that drive inequality rise and fall within and among nations. He also reveals who has been helped the most by globalization, who has been held back, and what policies might tilt the balance toward economic justice. "The data [Milanovic] provides offer a clearer picture of great economic puzzles, and his bold theorizing chips away at tired economic orthodoxies." —The Economist "Milanovic has written an outstanding book-- informative, wide-ranging, scholarly, imaginative and commendably brief. As you would expect from one of the world's leading experts on this topic, Milanovic has added significantly to important recent works by Thomas Piketty, Anthony Atkinson and Francois BourguignonEver-rising inequality looks a highly unlikely combination with any genuine democracy. It is to the credit of Milanovic's book that it brings out these dangers so clearly, along with the important global successes of the past few decades. —Martin Wolf, Financial Times

Governance in a Global Economy

This book comprises key essays on comparative regionalism and, more broadly, on regional conflict and cooperation by Professor Etel Solingen. The study of regionalism, a subject pioneered by Solingen in the 1990s, is now an established field of inquiry, with a large community of scholars and practitioners around the world. This book provides a window into an evolving conceptual framework for comparing regional arrangements, with a special emphasis on non-European regions. Framed by a comprehensive, previously unpublished introduction, the chapters provide a broad spectrum of analysis on domestic political economy, democracy, regional institutions, and global forces as they shape different regional outcomes. Themes as different as the regional effects of democratization in the Middle East and East Asia, the rise of China, Euro-Mediterranean relations, and regional nuclear trajectories are traced back to a common analytical core. The nature of domestic ruling coalitions serves as the pivotal analytical anchor explaining the effects of globalization and economic reform on different regional arrangements. This collection provides a focal point that brings this work together in a new light and will be of much interest to students of regionalism, international relations theory, international and comparative political economy, international history and grand strategy.

Lost Decades: The Making of America's Debt Crisis and the Long Recovery

Ideally suited to upper-undergraduate and graduate students, Analyzing the Global Political Economy critically assesses the convergence between IPE, comparative political economy, and economics. Andrew Walter and Gautam Sen show that a careful engagement with economics is essential for understanding both contemporary IPE and for analyzing the global political economy. The authors also argue that the deployment of more advanced economic theories should not detract from the continuing importance for IPE of key concepts from political science and international relations. IPE students with little or no background in economics will therefore find this book useful, and economics students interested in political economy will be alerted to the comparative strengths of political science and other social science disciplines. A concise look at the foundations of analysis in the political economy of global trade, money, finance, and investment Suitable for upper-undergraduate and graduate students with some or no economic background Techniques and findings from a range of academic disciplines, including international relations, political science, economics, sociology, and history Further reading and useful weblinks including a range of relevant data sources, listed in each chapter

Debate-style readers can be effective and provocative teaching tools in the classroom. But if the readings are not in dialogue with one another, the crux of the debate is lost on students, and the reader fails to add real depth to the course. Controversies in Globalization solves this issue by inviting 15 pairs of scholars and practitioners to write specifically for the volume, directly addressing current and relevant questions in international relations through brief "yes" and "no" pieces. Providing students with necessary context, the editors offer introductions that effectively frame the debate and make clear what is at stake, both from a theoretical as well as from a practical perspective. Concluding discussion questions in each chapter encourage critical thinking and analysis.

Globalization and the Environment

This book is the eagerly awaited successor to Robert Gilpin's 1987 The Political Economy of International Relations, the classic statement of the field of international political economy that continues to command the attention of students, researchers, and policymakers. The world economy and political system have changed dramatically since the 1987 book was published. The end of the Cold War has unleashed new economic and political forces, and new regionalisms have emerged. Computing power is increasingly an impetus to the world economy, and technological developments have changed and are changing almost every aspect of contemporary economic affairs. Gilpin's Global Political Economy considers each of these developments. Reflecting a lifetime of scholarship, it offers a masterful survey of the approaches that have been used to understand international economic relations and the problems faced in the new economy. Gilpin focuses on the powerful economic, political, and technological forces that have transformed the world. He gives particular attention to economic globalization, its real and alleged implications for economic affairs, and the degree to which its nature, extent, and significance have been exaggerated and misunderstood. Moreover, he demonstrates that national policies and domestic economies remain the most critical determinants of economic affairs. The book also stresses the importance of economic regionalism, multinational corporations, and financial upheavals. Gilpin integrates economic and political analysis in his discussion of "global political economy." He employs the conventional theory of international trade, insights from the theory of industrial organization, and endogenous growth theory. In addition, ideas from political science, history, and other disciplines are employed to enrich understanding of the new international economic order. This wide-ranging book is destined to become a landmark in the field.

Global Political Economy

The Oxford Handbook of International Relations offers the most authoritative and comprehensive overview to date of the field of international relations. Arguably the most impressive collection of international relations scholars ever brought together within one volume, the Handbook debates the nature of the field itself, critically engages with the major theories, surveys a wide spectrum of methods, addresses the relationship between scholarship and policy making, and examines the field’s relation with cognate disciplines. The Handbook takes as its central themes the interaction between empirical and normative inquiry that permeates all theorizing in the field and the way in which contending approaches have shaped one another. In doing so, the Handbook provides an authoritative and critical introduction to the subject and establishes a sense of the field as a dynamic realm of argument and inquiry. The Oxford Handbook of International Relations will be essential reading for all of those interested in the advanced study of global politics and international affairs.

Global Political Economy

Regions. How they emerge and how they are dramatically changing the appearance of the present ‘world of states’ and its related forms of governance from local to global levels is analysed in this monograph. But what are regions? Regions can be small or huge. They can be part of a single state, be composed out of different states or stretched out across borders. They can be important recognized economic, social or cultural entities or they can be largely ignored by the people who live on a region’s territory. They can be well-defined with clear cut boundaries as is the case in so-called ‘constitutional regions’ or they can be fuzzy as for instance in cross-border regions. In sum, they are not a natural kind and defining regions is not a simple task. Luk Van Langenhove advances the concept of region building as an alternative to the construction of regions with three issues of region building being explored: - Why are regions built in a world of states? - How do region building processes take place? - How are regions transforming the present world order? Crossing disciplinary boundaries, this book is an exercise in theorizing regions and brings together under one conceptual framework, different processes and concepts such as regional integration, devolution, federalism, and separatism and refines the social constructionist view on regions

EU Trade Strategies

Globalization is dramatically reshaping policy landscapes, thereby creating new opportunities and threats for governments and firms. The resultant restructuring of policy spaces requires an emphasis on the need to cope with globalization, since the distribution of its costs and benefits is asymmetrical across countries, sectors, firms and factors. Unlike previous books, Coping with Globalization concentrates firmly on conceptual issues, in order to consider in detail the coping strategies of both firms and governments.

Analyzing the Global Political Economy
This landmark book is the first of its kind to assess the challenges of African region-building and regional integration across all five African sub-regions and more than five decades of experience, considering both political and economic aspects. Leading scholars and practitioners come together to analyze a range of entwined topics, including: the theoretical underpinnings that have informed Africa’s regional integration trajectory; the political economy of integration, including the sources of different ‘waves’ of integration in pan-Africanism and the reaction to neo-liberal economic pressures; the complexities of integration in a context of weak states and the informal regionalization that often occurs in ‘borderlands’; the increasing salience of Africa’s relationships with rising extra-regional economic powers, including China and India; and comparative lessons from non-African regional blocs, including the EU, ASEAN, and the Southern Common Market. A core argument of this book, running through all chapters, is that region-building must be recognized as a political project as much as if not more than an economic one; successful region-building in Africa will need to include the complex political tasks of strengthening state capacity (including states’ capacity as ‘developmental states’ that can actively engage in economic planning), resolving long-standing conflicts over resources and political dominance, improving democratic governance, and developing trans-national political structures that are legitimate and inclusive.

Essays on the Political Economy of Rural Africa

Critics of globalization claim that economic integration drains political authority from states: devolving authority to newly empowered regions, delegating it to supranational organizations, and transferring it to multinational firms and nongovernmental organizations. Globalization is also attacked for forcing convergence of state institutions and policies and threatening the ability of societies to chart their own democratically determined courses. In Governance in a Global Economy, Miles Kahler and David Lake assemble the contributions of seventeen leading scholars who have systematically investigated how global economic integration produces changes of governance. These authors conclude that globalization has created a new and intricate fabric of governance, but one that fails to match the stark portrait of beleaguered states. Exploring changes in governance across several policy areas (such as tourism, trade, finance, and fiscal and monetary policy), the authors demonstrate that globalization changes the policy preferences of some actors, increases the bargaining power of others, and opens new institutional options for yet others. By reintroducing agency and choice into our understanding of globalization, this book provides important new insights into the complex and contingent effects of globalization on political authority and governance. The introduction and the conclusion are by the editors; the contributors are James A. Caparoso, Benjamin J. Cohen, Barry Eichengreen, Zachary Elkins, Geoffrey Garrett, Peter Gourewitch, Virginia Haubler, Michael J. Hiscox, Robert O. Keohane, Lisa L. Martin, Walter Mattli, Kathleen R. McNamara, Joseph S. Studyguide for Global Political Economy by Ravenhill, John

Studyguide for Global Political Economy by Ravenhill, John. ISBN 9780199570812

The financial crisis that swept across East Asia during 1997-1998 was devastating not only in its economic impact but also in its social and political effects. The explosive growth and sociopolitical modernization that had powered the region for much of the preceding decade suddenly were dramatically interrupted. East Asia is economically outperforming the rest of the developing world once again and has become a leading force in the global economy. In the wake of the crisis, East Asia changed in important ways. Crisis as Catalyst contains assessments of these changes—both ephemeral and permanent—by a wide range of specialists in Asian economics and politics. The crisis, as the contributors to this volume show, catalyzed changes across political, corporate, and social arenas both in the countries hit hard by the crisis and in others throughout the region. The authors of Crisis as Catalyst examine what has changed (as well as what has not changed) in East Asia since the crisis, explain these variations, and reflect on the long-term significance of these developments.

One World, Ready Or Not
Africa, which was not long ago discarded as a hopeless and irrelevant region, has become a new ‘frontier’ for global trade, investment and the conduct of international relations. This book surveys the socio-economic, intellectual and security related dimensions of African regionalisms since the turn of the 20th century. It argues that the continent deserves to be considered as a crucible for conceptualizing and contextualizing the ongoing influence of colonial policies, the emergence of specific integration and security cultures, the spread of cross-border regionalisation processes at the expense of region-building, the interplay between territory, space and trans-state networks, and the intrinsic ambivalence of global frontier narratives. This is emphasised through the identification of distinctive 'threads' of regionalism which, by focusing on genealogies, trajectories and ideals, transcend the binary divide between old and new regionalisms. In doing so, the book opens new perspectives not only on Africa in international relations, but also Africa's own international relations. This text will be of key interest to students and scholars of African politics, African history, regionalism, comparative regionalism, and more broadly to international political economy, international relations and global and regional governance.

Issues and Actors in the Global Political Economy
Praised for its authoritative coverage, Global Political Economy places the study of IPE in its broadest theoretical context. This text not only helps students understand the fundamentals of how the global economy works but also encourages them to use theory to more fully grasp the connections between key issue areas like trade and development. Building Regions
A clear, authoritative guide to the crisis of 2008, its continuing repercussions, and the needed reforms ahead. The U.S. economy lost the first decade of the twenty-first century to an ill-conceived boom and subsequent bust. It is in danger of losing another decade to the stagnation of an incomplete recovery. How did this happen? Read this lucid explanation of the origins and long-term effects of the recent financial crisis, drawn in historical and comparative perspective by two leading political economists. By 2008 the United States had become the biggest international borrower in world history, with more than two-thirds of its $6 trillion federal debt in foreign hands. The proportion of foreign loans to the size of the economy put the United States in league with Mexico, Indonesia, and other third-world debtor nations. The massive inflow of foreign funds financed the booms in housing prices and consumer spending that fueled the economy until the collapse of late 2008. This was the most serious international economic crisis since the Great Depression of the 1930s. Menzie Chinn and Jeffry Frieden explain the political and economic roots of this crisis as well as its long-term effects. They explore the political strategies behind the Bush administration’s policy of funding massive deficits with foreign borrowing. They show that the crisis was foreseen by many and was avoidable through appropriate policy measures. They examine the continuing impact of our huge debt on the continuing slow recovery from the recession. Lost Decades will long be regarded as the standard account of the crisis and its aftermath.

The Oxford Handbook of International Relations
Despite abundant scepticism about their economic benefits, Free Trade Agreements (FTAs) have proliferated at a rapid pace. Policy diffusion models explain how different sets of preferential trade agreements are interconnected and establish under what conditions FTAs can work for or against the emergence of coherent regional blocs.

Linking Trade and Security
Offering an accessible introduction to both the historical roots and the contemporary dynamics of today’s world economy, the extensively revised sixth edition of this bestselling textbook continues to lead the way in equipping students with the knowledge required to make sense of the fast-paced discipline of Global Political Economy. Illustrating the breadth of the subject, the book’s authors – both highly regarded experts in the field – show how the national and international interact, while also placing an emphasis on the historical evolution of the world economy in order to appreciate the nuances of today’s economic structures. The global economy is traced from the Industrial Revolution through each phase of a shifting world order to the modern day. Then follows an engaging exploration of the dynamics of today’s economy, including trade, production, finance, labour, gender, development, the environment, security and governance. This takes into account the latest developments in the global economy, from automation and the challenges posed to the labour force, to artificial intelligence and the increasing complex, global supply chains of modern transnational firms. This is the most authoritative and accessible textbook on global political economy, making it the ideal companion for students at undergraduate and
postgraduate levels, on politics, international relations and related degrees. New to this Edition: - Extensively updated to feature the latest empirical developments, including rising economic nationalism, US trade wars with China, and populism. - Brand new boxed features illustrate the latest dynamics, including the impact of digital technologies, artificial intelligence and automation, and the growth and consequences of increasing inequality. - Greater coverage of the sustained threats to the liberal international order and likely future scenarios.

Global Political Economy

Tony Heron examines recent global policy responses to the erosion of non-reciprocal tariff and quota preferences caused trade liberalizing by focusing on a sample of small, middle income countries which have historically enjoyed favourable access to OECD markets.

Region-Building in Africa

The essays in this volume represent a dialogue between theory and data. The theory is drawn from a branch of contemporary political economy which can also be labeled the collective-choice school. The data are drawn from Africa. The book extends the methods of reasoning developed in collective choice from their original base—the advanced industrial democracies—to new territory, the literature on rural Africa. Such an extension challenges the power of this form of political economy. It also enriches it, for the central questions which motivate the contemporary study of political economy are often addressed with unique clarity in the scholarship on rural Africa.

Geopolitics, Supply Chains, and International Relations in East Asia

Covering the basics necessary for a course in international political economy (IPE), this text comes from a non-American, critical perspective and the contributors are drawn from prominent scholars of IPE around the world.
